Academic Forum

Amia.org/AFcommunity

Lead your program to excellence

The Forum is an institutional membership within AMIA. Academic programs dedicated to biomedical and health informatics convene and collaborate to share best practices, innovative methods, and act jointly on issues important to them. Forum members elect leadership from among themselves.

Academic Forum Communities

Clinical Informatics Program Directors (CIPD) is the home for the Clinical Informatics Fellows Match. The community provides leadership for the ACGME Clinical Informatics Programs or future programs. Throughout the year, CIPD Members provide ongoing CI Fellows training bringing in fellows from across the U.S.

Academic Leaders in Nursing Informatics (ALNI). ALNI strives to create an environment that encourages the development of fellowships in Clinical Informatics and supports the continued evolution of these programs.

"ALNI provides community with those who do the same sorts of things as I do each day." LaVerne Manos, DNP, RN-BC, FAMIA

Biomedical and Health Informatics Academic Leaders (BMI-Leaders) facilitates professional networking and provides a forum for those responsible for the leadership and management of academic units. Members share their expertise, support benchmarking data, position statements, best practices and other shared standards within a private, secure community.

Professional Master's Educators (PMEC) shares expertise with educators and leaders. PMEC supports the creation of bench marking data, position statements, best practices and other shared standards to improve the structure and function of their academic programs.

Baccalaureate Health Informatics Educators (BEC) convene to share knowledge and expertise among members who are charged with the coordination and teaching of baccalaureate programs. BEC members work towards creating standards to improve baccalaureate health informatics courses.
